MAHAD AAMIR

Berlin, Germany ⋄ +49 15510 388453 ⋄ iam@mhd3v.com ⋄ linkedin.com/in/mhd3v

EXPERIENCE

Senior Software Engineer October 2025 - Present
Nelly Solutions (Series B) *Berlin, Germany*

- Migrated patient creation (70K+/week) from monolith to microservice with zero downtime; centralized logic and appointment-proximity matching cut duplication by 40%+.
- Built an LLM-powered incident triage agent with tool calling and cross-repository retrieval; delivered investigations in < 3 minutes p95, saving an estimated 50+ engineering hours/week.
- Architected consent-gated extraction pipelines across 50+ practices, implementing keyed-hash pseudonymization and deploying a German NER transformer via spaCy for PII redaction, enabling AI training and analytics.
- Cut annual AWS Glue costs by $35K+ by identifying redundant Iceberg optimization across 700+ tables and restricting optimizer execution to query-critical tables.

Software Engineer September 2024 - October 2025
Meta (Monetization) *London, United Kingdom*

- Designed catalog parity infrastructure comparing ingested data against seller sources, orchestrating sampling, extraction, retries, scoring, and aggregation to surface data-quality gaps.
- Scaled LLM-as-judge assessment across 100K+ catalogs, reducing annualized labeling costs by an estimated $15M+ while retaining human review for high-value catalogs.
- Established attribute-level benchmarks with human annotators and iterated on judge prompts, achieving $> 80\%$ precision and recall from baselines below 50% for some attributes.
- Partnered with ad-ranking teams to identify and evaluate candidate ranking signals, surfacing a potential +0.07% Meta revenue uplift through offline evaluation.
- Led engineering efficiency initiatives delivering an estimated 1.25 engineering-years of savings, including self-service pipeline onboarding that eliminated manual configuration across multiple repositories.

Senior Software Engineer August 2023 - August 2024
Klarna (Card and Banking Domain) *Berlin, Germany*

- Designed and built a low-latency variable-serving service (10K+ RPS, < 100 ms) powering real-time risk decisioning policies in user-facing credit flows.
- Led CESOP regulatory compliance: aligned reporting scope with legal and stakeholders, and built ingestion covering non-EU card and SEPA transactions for millions of users across EU markets.
- Developed an export pipeline surfacing DynamoDB-backed variable data (50K+ daily transactions) for downstream risk assessment and reporting flows.
- Built an ETL pipeline for extraction of 10M+ historical financial transactions spanning 6 years, unblocking downstream regulatory reporting workflows.

Software Engineer September 2022 - July 2023
Ostrom (Seed) *Berlin, Germany*

- Designed an EV smart-charging optimization algorithm that schedules charging windows against day-ahead spot electricity prices, minimizing charging costs for dynamic tariff users.
- Productionized a dynamic pricing engine aggregating smart-meter consumption against hourly spot prices to compute user billing, enabling monetization of Ostrom's flagship SimplyDynamic tariff.
- Implemented failover and retry mechanisms across core APIs to absorb upstream provider outages, cutting customer support requests by 5%+.

EDUCATION

Bachelor of Science in Computer Science, COMSATS University September 2015 - July 2019

SKILLS

Core Expertise	Distributed systems, data pipelines, high-throughput backend services, ML infrastructure
Languages & Data	TypeScript, Python, PostgreSQL, DynamoDB, Kafka, SQS, SNS
Infrastructure	AWS (ECS, Lambda, CDK), CI/CD, Docker, event-driven systems
Observability & Tooling	Datadog, Sentry, GitHub Actions, Jenkins, LLM eval tooling, feature pipelines
