SUMMARY

Senior Backend Engineer bringing 7 years of experience building high-scale distributed systems and data infrastructure at companies like Meta and Klarna. Proven track record of delivering measurable business impact, including $15M+ cost savings, production systems handling 10K+ RPS, and large-scale data pipelines powering ML systems.

EXPERIENCE

Senior Software Engineer October 2025 - Current
Nelly Solutions (Series-B) *Berlin, Germany*

- Built a data extraction pipeline across 50+ practices (25K+ patients), enabling automated collection of evaluation datasets for training and improving an AI consultation agent.
- Designed and launched FirstResponder, an automated alert triage service that generates investigation reports before engineer involvement, saving 50+ engineering hours per week.
- Improved data quality by reducing patient duplication, increasing data coverage, and strengthening correlation between internal and external data sources.

Software Engineer September 2024 - October 2025
Meta (Monetization) *London, United Kingdom*

- Built and scaled infrastructure for an LLM-based quality evaluation system, automating labeling across 100K+ catalogs and contributing to $15M+ annual cost savings.
- Identified and shipped new ad-ranking signals, driving measurable revenue uplift (0.07% at scale).
- Led internal engineering efficiency initiatives, reducing development overhead equivalent to 1.25 engineering-years.
- Designed data pipelines and evaluation workflows to improve precision/recall (>80%) for parity measurement system.

Senior Software Engineer August 2023 - August 2024
Klarna (Card and Banking Domain) *Berlin, Germany*

- Designed and built a low-latency banking decision service handling 10K+ RPS with sub-100ms response targets, supporting real-time credit decisions.
- Built ETL pipelines processing 10M+ records across 6 years, unblocking regulatory reporting workflows.
- Developed an export pipeline consolidating 50K+ daily transactions to support risk assessment and reporting flows.
- Built regulatory reporting pipelines covering 100K+ accounts, enabling CESOP compliance across multiple EU markets.

Software Engineer September 2022 - July 2023
Ostrom (Seed) *Berlin, Germany*

- Designed and implemented an EV smart-charging optimization system leveraging spot electricity pricing, improving cost efficiency for users.
- Built backend for real-time pricing engine, enabling user onboarding for Ostrom's flagship SimplyDynamic tariff.
- Implemented failover and resiliency mechanisms across core APIs, reducing customer-facing issues by 5%.

Software Engineer January 2022 - August 2022
Retailo (Series-A) *Islamabad, Pakistan*

- Migrated 5 core services from monolith to microservices, improving API latency by 25%.
- Contributed to the revamp of authentication and configuration services, supporting a growing user base of 50K+.
- Standardized logging, monitoring, and API documentation, reducing AWS infrastructure costs by 10%.

EDUCATION

Bachelor of Science in Computer Science, COMSATS University September 2015 - July 2019

SKILLS

Core Expertise	Distributed systems, Data pipelines, High-throughput backend services, ML infrastructure
Programming	TypeScript, Python, SQL
Infrastructure	AWS (ECS, Lambda, CDK), CI/CD, event-driven systems
Observability & Tooling	Datadog, Sentry, GitHub Actions, Jenkins
