EXPERIENCE

Senior Software Engineer October 2025 - Present
Nelly Solutions (Series-B) *Berlin, Germany*

- Led design for consent-aware PMS data extraction pipelines across 50+ practices (25K+ patients), handling pseudonymization and legal constraints to enable golden datasets for training Nelly's AI consultation agent.
- Shipped FirstResponder, a LLM-powered alert triage service that investigates incidents through multiple integrations (Datadog, Linear, multi-repo codebases), saving 50+ eng hours weekly.
- Reduced patient duplication from 0.89% to 0.55% (1.6× reduction) by instrumenting creation-source tracking to identify offending call sites, then driving cross-team remediation efforts to completion.
- Improved appointment ingestion coverage by 5%+ by decoupling validation of non-critical data entities, expanding the reachable user base for the AI scribe product.

Software Engineer September 2024 - October 2025
Meta (Monetization) *London, United Kingdom*

- Led execution for end-to-end infrastructure (sampling, orchestration, scoring, aggregation) for a catalog parity measurement system, enabling automated catalog onboarding use cases tied to $500M+ TAM.
- Automated human labeling using LLM-as-judge for parity assessment across 100K+ catalogs, generating $15M+ in annual opex savings.
- Established golden datasets and accuracy benchmarks with human annotators; iterated on prompts to improve LLM judge precision and recall to >80%.
- Partnered with ad-ranking teams to explore and evaluate multiple candidate ranking signals, surfacing a combined +0.07% incremental Meta revenue opportunity.
- Served as team's Better Engineering champion; defined BE roadmap and engineering-years-saved target, driving initiatives worth 1.25 engineering years to completion.

Senior Software Engineer August 2023 - August 2024
Klarna (Card and Banking Domain) *Berlin, Germany*

- Led CESOP regulatory compliance: aligned reporting scope with legal and stakeholders, and built ingestion covering non-EU card and SEPA transactions for millions of users across EU markets.
- Designed and built a low-latency variable-serving service (10K+ RPS, sub-100ms) powering real-time risk decisioning policies in user-facing credit flows.
- Developed an export pipeline surfacing DynamoDB-backed variable data (50K+ daily transactions) for downstream risk assessment and reporting flows.
- Built ETL pipeline for extraction of 10M+ historical financial transactions spanning 6 years, unblocking downstream regulatory reporting workflows.

Software Engineer September 2022 - July 2023
Ostrom (Seed) *Berlin, Germany*

- Designed an EV smart-charging optimization algorithm that schedules charging windows against day-ahead spot electricity prices, minimizing charging costs for dynamic tariff users.
- Productionized a dynamic pricing engine aggregating smart-meter consumption against hourly spot prices to compute user billing, enabling monetization of Ostrom's flagship SimplyDynamic tariff.
- Implemented failover and retry mechanisms across core APIs to absorb upstream provider outages, cutting customer support requests by 5%+.

EDUCATION

Bachelor of Science in Computer Science, COMSATS University September 2015 - July 2019

SKILLS

Core Expertise	Distributed systems, Data pipelines, High-throughput backend services, ML infrastructure
Programming	TypeScript, Python, PostgreSQL, DynamoDB, Kafka/SQS/SNS
Infrastructure	AWS (ECS, Lambda, CDK), CI/CD, Docker, event-driven systems
Observability & Tooling	Datadog, Sentry, GitHub Actions, Jenkins, LLM eval tooling, feature pipelines
